DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2 June 2003 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 31, 33-39 and 41-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Xu et al. [US 6,356,014] in view of Lee [US 5,401,676].

Regarding claims 31, 39 and 50, Xu et al. disclose a cathode structure having cathode material [213], at least one emitter tip [239], and an emitting layer [240] with thickness 100 angstroms (figure 2E, column 6 lines 20-36). Xu et al. do not teach the emitting layer being comprised of metal silicide.

Art Unit: 2875

Lee teaches the use of metal silicide for an emitting layer [40] on an emitter tip [37] (figure 3, column 4 lines 18-29).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use the material metal silicide for the emitting layer of Xu et al. for purpose of providing a stronger electron emission characteristic of the emitter.

Regarding claims 33 and 41, Xu et al. disclose an emitting layer [240] with thickness 100 angstroms (figure 2E, column 6 lines 20-36).

Regarding claims 34 and 42, Xu et al. disclose a cathode material being p-doped amorphous silicon (column 4 lines 5-10).

Regarding claims 35-38 and 46-49, Lee discloses an emitting layer [40] being comprised of metal silicide (column 4 lines 20-24).

Regarding claims 43-45, Xu et al. disclose the cathode material [213] being polycrystalline silicon (column 4 lines 5-10).
